PROFESSIONAL SUMMARY

Data professional with an M.S. in Data Science and Analytics and hands-on work across computer vision, statistical modeling, analytics, and data pipelines. Built a pre-production restaurant inventory MVP, an ERPNext QA environment over 1.07 million retail rows, and reporting pipelines from official CMS data using Python, SQL, PostgreSQL, and Power BI.

TECHNICAL SKILLS

Languages & Data: Python, SQL, PostgreSQL, SQLite, DuckDB, Pandas, NumPy, REST APIs, CSV/JSON/Parquet
ML & Statistics: YOLOv11s, ResNet152, TensorFlow/Keras, scikit-learn, ByteTrack, OCR, embeddings, hypothesis testing, confidence intervals
Analytics & Engineering: Power BI, Excel, Streamlit, ETL, dimensional modeling, reconciliation, data-quality testing, Docker, Git/GitHub, pytest

PROFESSIONAL EXPERIENCE

Data Scientist (Part-Time Contract) | Powo Studios, Boca Raton, FL | Feb 2026 - Jul 2026

- Designed POWO Vision, a pre-production restaurant inventory MVP combining camera-based item recognition, event-driven inventory state, and LLM-generated reorder drafts for store operators.
- Controlled demos reached 96.9% end-to-end recognition over 5,000+ images and 10+ classes; found data leakage, reset detection reporting to 0.578 held-out-day mAP, and added open-set fallback controls.
- Built AthenaText's pre-production API console, OAuth 2.1 flow, MCP-over-HTTP server, 11 connectors, and 7 client SDKs; deployed the implementation before the contract ended without claiming production adoption.

Environment: Python, SQL, YOLOv11s, ByteTrack, OCR, FastAPI, PostgreSQL/Supabase, Power BI, Docker

Research Assistant | Bharati Vidyapeeth, Navi Mumbai, India | Aug 2023 - May 2024

- Led five-class ResNet152 training and evaluation on approximately 25,000 retinal images and contributed research, analysis, and writing to two publications.
- Conducted literature search, source selection, technique comparison, synthesis, and editing for a five-year review of machine learning in digital forensics.

Machine Learning Intern | RedFiber, Navi Mumbai, India | Apr 2023 - Jul 2023

- Built Aizer, a Rasa/NLP chatbot used for approximately 30 real client intake sessions through structured self-service requirements collection.
- Built Power BI reporting used by management for staffing, recruitment, sales, project allocation, and delivery planning.

PROJECTS

ERPNext Order-to-Cash Governance & QA

- Processed 1,067,371 real retail rows, reconciled count and signed revenue to source, quarantined 251,375 invalid rows with reason codes, and verified invoice, credit-note, GL-balance, and access controls in controlled ERPNext UAT.

Tools: ERPNext, Python, SQL, DuckDB, Docker, Power BI

CMS Hospital Quality & Cost Benchmarking

- Integrated six official CMS sources into a 5,411-hospital mart; produced peer benchmarks and review flags with zero critical data-quality failures while preserving 45 financial reconciliation warnings for investigation.

Tools: Python, SQL, DuckDB, REST APIs, Power BI, Excel

MetroCycle Bike Demand Modeling

- Modeled 17,379 hourly rentals with Negative Binomial inference and chronological validation; gradient boosting reached R2 0.905 on the untouched final 20% holdout.

Tools: Python, SQL, scikit-learn, statistical modeling, Streamlit

Credit Risk & Loan Default Prediction

- Built a leakage-controlled lending-risk workflow with class weighting, probability calibration, cost-sensitive thresholding, and post-model group audits; test ROC AUC was 0.773 with an 80.0% default recall.

Tools: Python, SQL, scikit-learn, model calibration, Power BI

EDUCATION

Master of Science, Data Science and Analytics - Florida Atlantic University, Boca Raton, FL | May 2026 | GPA: 3.70/4.0
Bachelor of Technology, Computer Science and Business Systems - Bharati Vidyapeeth, Navi Mumbai, India | Jun 2024
